From THECB ACGM (accessed 28 Sept 2017
http://www.thecb.state.tx.us/AAR/UndergraduateEd/WorkforceEd/acgm.htm):

BIOL 1108 Biology for Non-Science Majors Laboratory I (lab)
This laboratory-based course accompanies BIOL 1308, Biology for Non-Science Majors I.
Laboratory activities will reinforce a survey of biological principles with an emphasis on humans, including chemistry of life, cells, structure, function, and reproduction.

Course Addition Proposal - BIOL 1108

Course Title: BIOL 1108 Biology for Non-Science Majors Laboratory I (lab)

Course Description: Laboratory activities will reinforce a survey of biological principles with an emphasis on humans, including chemistry of life, cells, structure, function, and reproduction.

Justification:
Texas colleges (http://www.thecb.state.tx.us/apps/tcc/) require only 6 credit hours of science to meet “Core Curriculum” requirements. Angelo State University graduation requirements require 8 credit hours of science. Transfer students who have met the “Core” requirements may be lacking the additional 2 hours of science credit required to graduate. Offering a stand-alone lab course provides an opportunity for this population of students to complete their science requirements here at ASU. Developing this course for online delivery reaches an addition population of completely online (distance learning) students, particularly Security Studies majors.

Offering the labs as separate 1 hour credits will potentially benefit a greater number of transfer students who have taken the 1308 or 1309 lectures at different Texas institutions. This also provides scaffolding for potentially offering completely online non-majors biology lecture courses (BIOL 1308, BIOL 1309).
**Course Prefix/Number:** BIOL 1108  
**Course Title:** Biology for Non-Science Majors Laboratory I  
**Course Description:** Laboratory activities will reinforce a survey of biological principles with an emphasis on humans, including chemistry of life, cells, structure, function, and reproduction.  
**Prerequisite:** NA

**Foundational Component Area: Life and Physical Sciences.** Courses in this category focus on describing, explaining, and predicting natural phenomena using the scientific method. Courses involve the understanding of interactions among natural phenomena and the implications of scientific principles on the physical world and on human experiences.

About This Course:
Daily the news media report on new discoveries in biology including human genetics and medicine. This course will help you understand these developments and make informed decisions regarding your health. We will do this by studying the biological nature of humanity with an emphasis on human structure and function. Laboratory activities will reinforce a survey of biological principles with an emphasis on humans, including chemistry of life, cells, structure, function, and reproduction.

The content of Biology 1108 includes generalizations and specifics of human biology. You are expected to understand and remember the facts presented and to demonstrate an ability to work with those facts. This information will be presented during lecture, in the laboratory and through reading your textbook and other assigned material.

Student Learning Outcomes (SLO)
The objective of the study of a natural sciences component of a core curriculum is to focus on describing, explaining, and predicting natural phenomena using the scientific method. Courses involve the understanding of interactions among natural phenomena and the implications of scientific principles on the physical world and on human experiences.

The SLO’s for this course and the associated activities include:

- Critical Thinking
  - (CT1) Students will gather, analyze, interpret and evaluate data.
    - Students will conduct experiments in the lab, gather data and then analyze their results.

- Communication
  - (CS1) Students will communicate information via written means on lab activities and projects.
    - Students will conduct lab experiments and communicate their findings in writing to each other and their instructor

- Empirical & Quantitative Skills
  - (EQS1) Students will collect and analyze quantitative data.
    - Students will take measurements as part of a lab experiment. They will analyze their data and generate conclusions.
  - (EQS2) Students will make observations to test a hypothesis and generate conclusions based on their observations.
    - Students will make directed observations, gather data and then analyze their results.
Course Materials Required:

**1108 Lab Manual** by Dixon and Darwin (or other)
You may elect to purchase the book, rent the book, purchase an “eBook”, etc. At least one copy of the textbook will be available in the library.

Internet Access and E-mail
Some assignments and course materials will be available at the course web site, http://www.angelo.edu/faculty/mdixon/HumanBiology/ or on the Blackboard web site http://blackboard.angelo.edu/.

You are expected to check your e-mail regularly. Your “username@angelo.edu” address will be used for class correspondence unless you enter a substitute address on Blackboard.

Attendance:
You are expected to attend all lab periods. The single most important thing you can do to get a good grade in this course is to show up. I will take attendance regularly. You will get a zero on the assignment if you are not present. Quizzes and other in-class activities may not be made up. The only exceptions that are made require prior permission.

Religious Holy Days:
A student who intends to observe a religious holy day during the semester should make that intention known in writing to the instructor during the first week of the semester and one week prior to the absence. If this submission is completed, a student who is absent from classes for the observance of a religious holy day shall be allowed to take make up missed exams or assignments scheduled for that day in accordance with syllabus policy.

Grades:
Your grade will be determined as follows:
- There are 11 regular lab activities in the semester worth 1100 points; 100 possible points each week. Points will be earned in various ways including pre-lab quizzes, activities during lab and post-lab quizzes.
- The lab rules quiz and the final lab of the semester together will be worth 100 points, which will be used to replace your lowest regular lab grade (see "Ultimate Lab").
- Your grade is an average of the points earned in all labs. All of your scores will be summed and divided by 1100.
- You will receive a zero for any lab you miss. A make-up lab is available once each week. There are no opportunities for extra credit except for the "Ultimate Lab".
- Your semester grade will be determined using the scale:
  - 90 – 100% = A
  - 80 – 89% = B
  - 70 – 79% = C
  - 60 – 69% = D
  - <60% = F

Rounding off of averages or the use of a curve may occur at the instructor’s discretion.

Academic Honor Code:
Angelo State University expects its students to maintain complete honesty and integrity in their academic pursuits. Students are responsible for understanding the Academic Honor Code, which is contained in both print and web versions of the Student Handbook. The honor code is available at www.angelo.edu/student-handbook/code-of-student-conduct/.
Special needs:
Persons with disabilities which may warrant academic accommodations must contact the Student Life Office, Room 112 University Center, in order to request and to implement academic accommodations.

Withdrawal From the Course:
You are not automatically withdrawn from a course if you stop attending. If you stop attending class and do not withdraw I am required to submit a grade for you. This "F" cannot be removed.

Note: Course syllabi are intended to provide students with basic information concerning the course. The syllabus can be viewed as a ‘blueprint’ for the course; changes in the syllabus can be made and students will be informed of any substantive changes concerning examinations, the grading or attendance policies and changes in assignments.

Topics

- Introduction, Syllabus
- Hypothesis Testing
- Stem Cells
- Digestion
- Nutrition
- Cancer
- Circulation
- Senses
- Traditional Genetics
- Modern Genetics
- Reproduction
