The Proximal Zone of Professional Impact (PZPI): **A Contextual Framework for Assessing Long-Term Influence and Impact of Colleges of Education**

To facilitate consistent long-term assessment of institutional impact, and afford comparative analysis, CREATE has established a Proximal Zone of Professional Impact (PZPI) for CREATE institutions. The Proximal Zone of Professional Impact is comprised of the university and all school districts and campuses within a seventy-five mile radius. The set of attachments in this book reflect an increased PZPI from 75 miles to 150 miles. This proximal zone describes a “P-16” professional community in the immediate vicinity of each university, and provides each College of Education a professional laboratory setting in which to collaboratively design and implement program improvements over time and to gauge their long-term success.

While this Proximal Zone of Professional Impact does not convey the complete impact scenario of the university’s teacher preparation programs, it does provide a common and consistent setting in which the university may measure program effects over time.

From CREATE’s perspective, the PZPI offers the following advantages:

1. It presents a useful frame of reference for Colleges of Education to utilize in assessing teaching and learning trends over time in the particular geographic area nearest their institution.
2. It provides Colleges of Education a field laboratory for research and development activities related to planned instructional interventions.
3. It establishes parameters of a professional community that are consistently defined across the CREATE consortium, enabling long-term program benchmarking and institutional comparisons.
4. It provides geographic boundaries that correlate to the university’s primary admission centers.
5. It affords a structure for long-term regional networking and professional partnerships among public and higher education institutions in the zone.
