MGMT 4091 – Research – Using SIMUL8 to Model and Analyze the Morning Traffic of Central High School

Course Description/Overview

The morning traffic to Central High School, San Angelo creates queues that occasionally extend into the State Highway 306 Loop, increasing the risk of traffic accidents. To address, primary data will be collected from time studies as well as any secondary data such as accident reports. From the data collection, a discrete-event simulation model will be developed. The model will simulate morning traffic. The model will be validated against actual data. What-if analysis will be performed using the validated model to generate potential solutions.

The burden of proof is upon the student to demonstrate the appropriateness of the appeal. A student with a complaint about a grade is encouraged to first discuss the matter with the instructor. For complete details, including the responsibilities of the parties involved in the grade appeal process and the number of days allowed for completing the steps in the process, see Operating Procedure 10.03 at: [http://www.angelo.edu/content/files/14196-op-1003-grade-grievance](http://www.angelo.edu/content/files/14196-op-1003-grade-grievance).
