Course Objectives

Learning Objectives
The primary goal of accounting is to provide information for decision making. Managerial accounting information is used by internal managers. Internal managers need more detailed information that is not captured in the financial reports prepared for external users. The information the managers seek is relevant, future oriented, and strategic. This course is designed to develop in students the effective use of accounting information in management decision making. The primary objectives and learning outcomes of this course are:

1. *Develop an understanding of managerial accounting terminology, principles, and practice.*
Recognize managerial accounting issues and how they differ from financial accounting issues. Analyze decision situations to determine appropriate information needs.

2. *Calculate product cost using a variety of cost methods.*
Understand and differentiate among different categories of costs. Select the appropriate models for different situations and build and apply the models for analysis appropriately.

3. *Determine the effect on profit.*
Determine the effect on profit by evaluating possible courses of action and reviewing the results.

4. *Plan for future financial results through the preparation of budgets.*
Read and create budgets, managerial cost reports, and variance analysis. Understand and articulate the assumptions and implications inherent with information in different managerial accounting reports.

5. *Develop solutions to integrative business problems, using accounting analyses in conjunction with managerial insights.*
Prepare complex and complete solutions to broad business cases, using accounting tools and techniques as well as knowledge and intuitions from non-accounting perspectives. Compose and present solutions in an informative and persuasive manner.

Upon completion of this course, students will be able to:

1. Identify cost classifications used for different management purposes.

2. Construct and apply overhead cost to jobs using predetermined overhead rates.

3. Construct activity rates for an activity-based costing system.

4. Use contribution margin to solve for breakeven sales.

5. Produce income statements using both variable and absorption costing.

7. Construct flexible budgets, compute direct materials and quantity and price variances, compute direct labor efficiency and rate variances, compute variable manufacturing overhead variances, and explain the significance of all variances.

8. Construct return on investment (ROI) analysis and identify how changes in sales, expenses, and assets affect ROI.

9. Produce analysis for make or buy and special-order decisions.

10. Analyze investment cash returns using net present value, payback, and rate of return.

11. Categorize cash inflows and outflows needed to produce a statement of cash flows using the indirect method.

The burden of proof is upon the student to demonstrate the appropriateness of the appeal. A student with a complaint about a grade is encouraged to first discuss the matter with the instructor. For complete details, including the responsibilities of the parties involved in the grade appeal process and the number of days allowed for completing the steps in the process, see Operating Procedure 10.03 at: [http://www.angelo.edu/content/files/14196-op-1003-grade-grievance](http://www.angelo.edu/content/files/14196-op-1003-grade-grievance).
