3. Demonstrate using the analytic technique of Analysis of Competing Hypothesis (ACH), Key Assumptions Check (KAC), and Change. Are you aware of the dimensions of these problems and of possible remedies? Do you have awareness of the psychological roots of intelligence failures? Have these psychological roots, by themselves, been sufficient to avoid intelligence policy failure? It is apparent that awareness of the dimensions of these problems and of possible remedies is not sufficient to avoid intelligence policy failure. Awareness that an aspect alone presents many challenges for the intelligence analyst. This development of tradecraft of intelligence to include critical thinking and structured reasoning can lead to policy failure.

4. List and describe two of four key functions of the intelligence policy nexus. Apply knowledge of critical thinking by using a set of analytic tools designed to hone your skills as an intelligence analyst. Discuss how biases play a part in intelligence failures. The intellectual tools, knowledge, and skills you develop are part of a broader intelligence-policy nexus. This nexus is the relationship between intelligence and national decision-making.

5. Describe how the intelligence-policy nexus can lead to policy failure. An Ethnographic Study. The analytical products of the intelligence community are intended to provide the president, Congress, and other policymakers with information that can be used to make national policy. However, making sense of these requirements facing the United States are daunting. Thus, the reading load is necessarily part of the day. 6. Put together a project that involves a weekend and an additional 10-15 hours of work. You should expect that this project will take up to 10 hours of work, so you should work on it over the weekend and during the week. You can submit the project online through the course website, a video to get you started, and previous students' examples.
